Site-to-Site VPN

- Nord VPN Configuration

Nord VPN Configuration

Whitelist Local IP's

After installing and nordvpn we need to whitelist the local subnets if we need to transfer files while being on the tunnel.

```
nordvpn whitelist remove all
nordvpn whitelist add subnet 192.168.0.0/16
```

This will generally work now. But if now we also need to route with iptables

```
ip route add 192.168.2.0/24 via 192.168.252.1
```
